

# **SWAMI VIVEKANAND UNIVERSITY, SIRONJA, SAGAR (M.P.)**

## **SYLLABUS**

**For**

**MASTER OF TECHNOLOGY (M.Tech.)  
EMBEDDED SYSTEM AND VLSI DESIGN**

**Course Code : MTVD**

Department of Electronics & Communication  
Engineering  
Faculty of Engineering

Duration of Course : 2 Year
Examination Mode : Semester
Examination System : Grading

Swami Vivekanand University, Sironja Sagar (M.P.)

2016-2017

**MTVD-0101 Advanced Mathematics**

**UNIT I**

Solution of Partial Differential Equation (PDE) by separation of variable method, numerical solution of PDE (Laplace, Poisson's, Parabola) using finite difference methods, Elementary properties of FT, DFT, WFT, Wavelet transform, Haar transform.

**UNIT II**

Probability, compound probability and discrete random variable. Binomial, Normal, Poisson's distribution. Sampling distribution, elementary concept of estimation and theory of hypothesis, recurred relations.

**UNIT III**

Stochastic process, Markov process transition probability transition probability matrix, just and higher order Markov process, Markov chain. Queuing system, transient and steady state, traffic intensity, distribution queuing system, concepts of queuing models (M/M/1: Infinity/ Infinity/ FC FS), (M/M/1: N/ Infinity/ FC FS), (M/M/S: Infinity/ Infinity/ FC FS)

**UNIT IV**

Operations of fuzzy sets, fuzzy arithmetic & relations, fuzzy relation equations, fuzzy logics. MATLAB introduction, programming in MATLAB scripts, functions and their application.

**UNIT V**

Introduction and definition of reliability, derivation of reliability functions, Failure rate, Hazard rate, mean time t future & their relations, concepts of fault tolerant analysis, Elementary idea about decision theory and goal programming.

**Reference Books:**

1. Higher Engineering Mathematics by B.V. Ramana, Tata Mc Hill.
2. Advance Engineering Mathematics by Ervin Kreszig, Wiley Easten Edd.
3. Applied Numerical Methods with MATLAB by Steven C Chapra, TMH.
4. Introductory Methods of Numerical Analysis by S.S. Shastri,
5. Introduction of Numerical Analysis by Forberg
6. Numerical Solution of Differential Equation by M. K. Jain
7. Numerical Mathematical Analysis By James B. Scarborough
8. Fourier Transforms by J. N. Sheddon
9. Fuzzy Logic in Engineering by T. J. Ross
10. Fuzzy Sets Theory & its Applications by H. J. Zimmersoms

### Unit I

**VLSI design methodologies:** VLSI Design flow, Design Hierarchy, Regularity, Modularity and Locality, VLSI design styles, Design quality, Packaging technology. MOS device design equations, Second order effects, the complementary CMOS Inverter DC characteristics.

### Unit II

**Circuit Characterization and Performance Estimation:** Parasitic effect in Integrated Circuits, Resistance estimation, capacitance estimation, Inductance. Switching characteristics, CMOS Gate transistor sizing, Power dissipation, CMOS Logic Structures, Clocking Strategies.

### Unit III

**CMOS Process Enhancement and Layout Considerations:** Interconnect, circuit Elements, Stick diagram, Layout design rules, Latchup, latchup triggering, latchup prevention, Technology related CAD issues.

### Unit IV

**Subsystem Design:** Structured design of combinational logic- parity generator, Multiplexer, code converters. Clocked sequential circuits- two phase clocking, charge storage, dynamic register element, dynamic shift register. Subsystem design process, Design of ALU subsystem, Adders, Multipliers. Commonly used storage/ memory elements.

### Unit V

**Field Programmable Devices:** Definitions of Relevant Terminology, Evolution of programmable Logic Devices, User- Programmable Switch Technologies, Computer Aided Design (CAD) Flow for FPDs, Programmable Logic, Programmable Logic Structures, Programmable Interconnect, Reprogrammable Gate Array, Commercially Available SPLDs, CPLDs and FPGAs, Gate Array Design, Sea-of-Gates.

**Swami Vivekanand University, Sagar (M.P.)**

**MTVD-0103 Advance Logic Design**

**Unit I**

Course overview; design concepts, introduction to logic circuit and Verilog. Implementation technology, CMOS logic gates, programmable logic devices. Optimized implementations of logic functions, canonical representations, Karnaugh maps, factoring, functional decomposition, NAND/NOR networks, bubble pushing.

**Unit II**

Verilog data types and operators, modules and ports, gate level modeling, time simulation/ scheduler. Circuit issues. Verilog behavioral models, number representation and arithmetic circuits, positional notation, signed numbers, arithmetic operations.

**Unit III**

Verilog specifications of combinational circuits, combinational logic building blocks, encoders/decoders, arithmetic comparison, etc. The basic latch, gated SR and D latch, master-slave and edge-triggered flip flops, counters, shift registers, Design examples, introduction to finite state machines; introduction to ModelSim.

**Unit IV**

Synchronous sequential circuits, design process, state assignment, hazards, glitches, asynchronous design, Metastability, Noise margins, Power, fan-out, skew Finite state machine design examples, Verilog representations.

**UNIT I**

**Introduction to Discrete Time Signals**

Sequences; representation of signals on orthogonal basis; Sampling and Reconstruction of signals.

**UNIT II**

**Discrete Systems**

Attributes; Z-Transform; Analysis of LSI systems; Frequency analysis; Inverse systems, Discrete Fourier Transform (DFT), Fast Fourier Transform algorithms, Implementation of discrete time systems.

**UNIT III**

**Design of FIR Digital Filters**

Window method, Park-McClellan's method; Effect of finite register length in FIR filter design.

**UNIT IV**

**Design of IIR Digital Filters**

Butterworth, Chebyshev and Elliptic Approximations; Lowpass, Bandpass, Bandstop and High pass filters.

**UNIT V**

**Introduction to VLSI DSP**

Transformations for high speed using pipelining, retiming, parallel processing, and folding techniques; Design of programmable DSPs.

### Unit-I

Embedded System Overview : Embedded System definition.

Processor Technology : General purpose, Single Purpose, Application Specific, Super scalar, Pipelined, Very Long Instruction Word (VLIW) Processor, Microprocessors, Micro controllers and DSP Processors. Embedded Processors in VLSI circuit.

### Unit-II

Architectural Issues : CISC, RISC, DSP and Harvard/Princeton Architectures.

Memory : ROM, EPROM, EEPROM, FLASH, RAM, SRAM, DRAM, SDRAM, NVRAM, EDORAM, DDRAM, Memory Hierarchy and Cache.

Interfacing : Interfacing using Glue Logic, Interrupt, DMA, I/O Bus structure, I/O devices, Serial Communication Protocols, Parallel Communication Protocols, Wireless Protocols.

### Unit-III

Introduction to 8-bit Microcontrollers e.g. 8051, 68HC11, 80196, Timers/Counters, USART. Detailed study of 8051 microcontroller, with its programming in assembly language and Interrupts, Serial Programming etc.

### Unit-IV

Interfacing of Microcontroller such as SPI, PWM, WDT, Input Capture , Output Compare Modes, Interfacing LED, Switches, ADC, DAC, LCD , RTC. Idea about the C programming of Microcontroller. I2C, CAN bus architecture.

### Unit-V

Introduction to 16/32-bit microcontrollers.

Introduction to ARM Architecture and Organization, Difference between ARM7 , ARM9 & ARM11 TDMI, ARM programming model, ARM Instruction set.

### Text/References

## MTVD – 0201 VLSI Technology

### Unit I

**Overview of Semiconductor Processing:** Electronic grade silicon preparation, Crystal growth, Czochralski process, wafer-preparation, slicing, Marking, polishing, evaluation. Basic wafer fabrication operations, wafer sort, clean room construction and maintenance.

### Unit II

**Oxidation:** Objectives, Silicon dioxide layer uses, Thermal oxidation mechanism and methods, Kinetics of oxidation, Deal Grove model, Oxidation processes, post oxidation evaluation.

### Unit III

**Basic Patterning:** Overview of Photo-masking process, Ten step process, Basic photoresist chemistry, comparison of positive and negative photoresists, X-ray lithography, Electron beam exposure system.

### Unit IV

**Doping:** Definition of a junction, Formation of doped region and junction by diffusion, diffusion process steps, deposition, drive-in-oxidation, Ion implantation- concept and system, implant damage, Comparison of diffusion and ion-implantation techniques.

### Unit V

**Deposition:** Chemical Vapor Deposition (CVD), CVD Process steps, CVD System types, Low-Pressure CVD (LPCVD), Plasma-enhanced CVD (PECVD), Vapor Phase Epitaxy (VPE), Molecular Beam Epitaxy (MBE), Metalorganic CVD (MOCVD), SOS (Silicon on Sapphire) and SOI (silicon on Insulator). Brief Introduction to Metallization.

7. S. K. Gandhi, *VLSI Fabrication Principles*, Wiley
8. W. R. Runyan, *Silicon Semiconductor Technology*, McGraw-Hill.

### **Unit-I**

Introduction to OS, Process Management & Inter Process Communication. Memory management, I/O subsystem, File System Organization.

### **Unit-II**

**(a)** Real Time Systems Concepts: Foreground/Background Systems, Critical Section of Code, Resource, Shared resource, Multitasking, task, context switch, Kernel, Schedules, Preemptive & Non-Preemptive Kernel, various scheduling methods.

**(b)** Real Time Scheduling. Real-Time task scheduling: Clock-driven, Event-driven, Scheduling of real-time task on a uniprocessor. Rate Monotonic Analysis (RMA), Earliest Deadline First (EDF), Scheduling with limited priority levels

### **Unit-III**

Kernel structure, Task scheduling, Task management, Resource sharing among tasks, Priority inversion problem, Priority inheritance protocol

An overview of scheduling in multiprocessor and distributed systems

### **Unit-IV**

Performance Metrics of RTOS, Programming in Vx Works, or COS-II Overview of C/OS-II Overview of some other commercial embedded operating systems: PSOS, VRTX, RT Linux, WinCE. Benchmarking real-time operating systems.

### **Unit-V**

Commercial real-time operating systems: Unix as a real-time operating system, Windows as a real-time operating system, Extensions to Unix : Host target approach, Preemption points, Fully preemptable kernel

### **Text/References**

1. Jean J. Labrosse, *MicroC/OS-II, The Real Time Kernel*
2. VxWorks details from Internet.
3. C/OS-II Manuals
4. David E. Simon, *An Embedded Software Primer*, Pearson Education
5. Dr. Rajib Mall, *Real time Systems, Theory and practices*, Pearson Education.

### Unit I

#### **Introduction to Testing Process:**

CMOS Testing, Reliability, Failures & Faults, Levels of Testing, Test economics, Elementary Testing Concepts, System and Field Testing, Burn in boards.

### Unit II

**Logic Simulation & Fault modelling:** Delay Models, Event driven simulation, general fault simulation, fault detection and redundancy, fault equivalence and fault dominance. Stuck-at faults, bridging faults, transistor faults, delay faults etc. Fault detection using Boolean Difference, Path Sensitization. Fault Collapsing

### Unit III

**Test generation for combinational & sequential circuits:** D-algorithm, PODEM, SPOOF. Automatic Test Pattern Generation. Primitive and Propagation Cubes. Fanout Oriented Test Generation. Controllability and Observability. Testing of sequential circuits as iterative combinational circuits, state table verification, random testing.

### Unit IV

**Design for testability:** Ad-hoc methods, Full scan & Partial scan design. Boundary scans. Testability analysis.

### Unit V

**Built-in self-test & IDDQ testing:** RAM BIST, Logic BIST Random and weighted random pattern testability BIST Pattern generator and response analyzer Scan-based BIST architecture Test point insertion for improving random testability. IDDQ testing, IDDQ test patterns, IDDQ measurement Case studies, Design for IDDQ testability

**MTVD – 0204 Micro Electronics**

**Unit I**

Review of quantum mechanics theory. Motion of electron in a periodic lattice. Band theory of solids, effective mass, holes.

**Unit II**

Statistics of carriers in semiconductors. Lifetime and recombination theory. Boltzmann transport equation. Carrier transport in semiconductors, including high field effect.

**Unit III**

P-N junction theory. Excess currents and breakdown in p-n junctions. Bipolar transistors. Ebers-Moll and small signal models. Switching characteristics. Nonuniformly doped transistors. High current and high frequency effects.

**Text/References**

## MTVD – 0205 Embedded Computing System Design

### **Unit-I**

Introduction: Embedding Complex Systems and Microprocessors, Embedded System Design Process, Designing Hardware and Software Components, Formalization of System Design, Application Examples.

### **Unit-II**

Instruction Sets: Assembly Language, ARM processor and memory organization. Data Operations and Control of Flow. SHARC Processor, Memory organization, Data Operations and flow control, Parallelism within the instructions.

### **Unit-III**

CPUs: Performance, Power Dissipation, Design Example, Data Compression. CPU Bus Protocols in ARM, Design, Development and Debugging.

### **Unit-IV**

Program design and Analysis: Program Design, Models of Program, Assembling, Linking, Compiling, Analysis and optimization of the Program Size and Execution times. Design Example: Software Modem.

### **Unit-V**

System Design Techniques: Design Methodologies, Requirement Analysis, Specifications, System Analysis, quality Assurance, Two Design Examples in Networking and Internet Enabled Systems and Automobile Applications.

### **Text/References**

1. Wayne Wolf, *Computers as Components*, Harcourt India Private Ltd.

MTVD – 0301(A) Opto-Electronics Integrated Circuits

**Unit I**

**Theory of Optical Wave guides:** Wave guide theory : one dimensional planar wave guides, two dimensional wave guides, transcendental equations, wave guide modes, mode cutoff conditions.

**Unit II**

**Optical Wave guide Fabrication and Characterization:** Waveguide fabrication: deposited films; vacuum-deposition and solution-deposition, diffused waveguides, ion-exchange and ion-implanted waveguides, epitaxial growth of III-V compound semiconductor materials, shaping of waveguides by wet and dry etching techniques. Waveguide characterization: surface scattering and absorption losses, radiation and bending losses, measurement of waveguide loss, waveguide profiling.

**Unit III**

**Fundamentals of Optical Coupling:** Transverse couplers. Prism couplers. Grating couplers. Fiber to waveguide couplers. Coupling between optical waveguides. Directional couplers. Applications of directional couplers.

**Unit IV**

**Guided Wave Modulators and Switches:** Physical effects used in light modulators : electro-optic, acousto-optic and magneto-optic effects. Waveguide modulators and switches.

**Unit V**

**Semiconductor Lasers and Detectors:** Laser diodes. Distributed feedback lasers. Integrated optical detectors.

**Unit VI**

**Recent Progress in Integrated Optics:** State-of-the-art technology in guided wave devices and applications, e.g. photonic switching, tunable laser diodes, optical integrated circuits.

**Text/ Reference**

1. T Tamir, *Guided Wave Optoelectronics*, Springer-Verlag, 1990
2. R Syms & J Cozens, *Optical Guided Waves and Devices*, McGraw-Hill, 1993

### UNIT I

Recent advances in semiconductor technology, Programmable logic devices, such as field programmable gate arrays (FPGAs), Programmable chip architectures, logic synthesis, SoC concepts, and the Verilog synthesizable subset, Implementation of a complex system on a single programmable chip.

### UNIT II

Tools and techniques for designing, verifying and implementing System-on-Chip (SoC) designs using programmable logic. Embedded system applications and their system-level hardware-software co-design.

### UNIT III

Implementation Aspects: Adders, ALUs, Multipliers, Dividers, Register Files, Buses, CISC/RISC, Memory hierarchy (caches, MMU, main memory)

### UNIT IV

ARM System-on-chip architecture.

### UNIT V

**Project Orientation:** Concept to Verilog hardware description language (HDL), verification using simulation, synthesis and programmable device implementation on an FPGA development board.

**MTVD- 0302 (A)- Communication RF IC Design**

**Unit I**

Basic concepts in RF Design: Analysis & Measurement Techniques. S-Parameter Models, Smith Chart Calculations.

**Unit II**

Trans-receive Architecture for Wireless Communication Standards. Non-Linearity, Harmonic Gain Compression, Desensitization, Cross Modulation, IMD & Inter-symbol Interface.

**Unit III**

RF IC Design concepts & Device Technologies: Low Noise Amplifiers, Mixers, Frequency Sources, Oscillators & Synthesizers, Power Amplifiers. Noises & Distortions in LNA, PA & Mixer Circuits.

**Unit IV**

PLL: Theory, Circuits, Distortion & Noises. Microwave Circuit Components & Design Concepts: Single Chip Radio Concepts, Design Issues Surrounding Systems as DECT, GSM, Blue Tooth etc. Case Studies.

## MTVD- 0302 (B)- Embedded System Programming

### **Unit-I**

Introduction to Linux Operating System. Shell Programming, Review of C-Programming and Data Structures.

### **Unit-II**

Overview of Embedded Systems – Sequential and Concurrent Models – Processor Solutions and Types – Types of Memory – Data Representation Formats – Usage of C in Embedded Systems – Programmers view of CPU – IO programming models – Concurrent Software Design – Scheduling – Memory Management – Mixing C & Assembly.

### **Unit-III**

Embedded System Design Issues , Challenges & Trends in Embedded Systems, Assemblers, Compilers, Linkers, Loaders, Debuggers , Profilers & Test Coverage Tools , Utilities like make, ranlib, objcopy & objdump etc.

### **Unit-IV**

Writing device drivers, Writing Time & Space Sensitive Programs, Programming in C for 8051, 68HC11 and 80196 microcontrollers.
